Supplier Audit Summary

TRAINING SCENARIO • FICTIONAL DATA • NOT A REAL SUPPLIER AUDIT

Purpose

This fictional summary is designed for AI literacy and document-analysis practice. Use it to extract findings, distinguish evidence from assumptions, identify missing information, and draft follow-up questions. It is not a regulatory, legal, quality, or supplier approval record.

Audit context

Field	Scenario detail
Supplier	Northstar Materials Ltd. (fictional)
Audit date	18 September 2026 (fictional)
Scope	Document review and a simulated site walkthrough
Auditor note	Evidence was incomplete in several areas; follow-up is required before conclusions are made.

Summary of observations

The simulated review identified five observations. The notes below describe the evidence recorded in the scenario and the information still needed. Severity and final disposition have intentionally not been assigned.

AUD-01 — Training records

Evidence noted: A training matrix was available, but two sampled role-based training records could not be located during the review.

Follow-up requested: Provide the current training matrix, the two missing records (or an explanation), completion dates, and the process for keeping records current.

AUD-02 — Document control

Evidence noted: Two copies of a work instruction showed different revision dates. The approved master copy was not identified in the supplied evidence.

Follow-up requested: Identify the controlled master, confirm the effective revision, and explain how obsolete copies are withdrawn from use.

AUD-03 — Traceability

Evidence noted: One sample record did not show a complete link between the incoming material lot and the related production record.

Follow-up requested: Provide the relevant lot identifiers and records, and explain how traceability is checked end to end.

AUD-04 — Corrective actions

Evidence noted: A corrective-action log listed an action as complete, but supporting effectiveness-check evidence was not included in the audit pack.

Follow-up requested: Share the action owner, completion evidence, effectiveness-check method, result, and approval date.

AUD-05 — Supplier monitoring

Evidence noted: A performance dashboard was included, but the reporting period and definitions for two indicators were not stated.

Follow-up requested: Confirm the dashboard period, indicator definitions, data sources, calculation method, and review owner.

Evidence gaps and cautions

• The scenario does not provide enough evidence to determine whether any observation is a minor or major nonconformity.

• No root cause, risk rating, supplier approval decision, or regulatory conclusion is supplied.

• Dates, names, records, and observations are fictional and created only for training.

Suggested questions for a follow-up meeting

• Which controlled documents and records should be considered authoritative?

• Who owns each follow-up item, and what is the target completion date?

• What objective evidence will demonstrate that each action is complete and effective?

• Are any interim controls in place while the evidence gaps are being resolved?

End of fictional training document. Do not use as evidence of an actual supplier audit.
